Complaint against the city of San Jose or Santa Clara Valley Water District and property owner failing too in force city and state ordinates and law posting.  
Rough draft 10-30-12 by Roger Castillo

For failing to comply with city ordinance posting on their properties and remove homeless from their property.  
Photos illustration of numerous laws being broken regards to the Clean Water Act and permitting through the state of California under the Clean Water Act under California State water control board permitting for sewage treatment operations and city operation.

As well as damage to private and non-private sectors on state and private property.  
Most recent danger on June 1, 2013 two separate forest fires on coyote Creek 5 to 6 alarm fire. Fire department dispatched to the creek to put out these large humongous fires off 280 freeway and adjacent to Story Road in the vicinity of Kelly Park.

Location or photos illustration of heavy pollution being delivered directly to the river system as well as damage to fences on private sectors and extreme biohazard condition, allowing directly or indirectly taken of endangered and threatened species. Allowing extremely dangerous conditions to prosiest to people, animals and collapsing of biology on watersheds ecosystems. In year 2012 Fire department dispatched to the creek estimate of 20 to 30 times to put out forest fires that were started by the homeless living along the creeks. Wasting resources and money that could be used in other areas.

Extensive surveys conducted on water way in correlation of Guadalupe River was about 6 miles and Coyote Creek 8 miles. All areas in question to on going problem by homeless activities to GPS location. Forwarding sight location to National Oceanic and Atmospheric Administration special agent Roy A.Torres and Dept Fish and Wildlife Sevice of California, officer Byron Jones and other agent directed to site. (SSRG) assessing the ongoing problem we have concluded that there are at least 11,000 to 12,000 people living within the streams and the city San Jose leaving no choice than to declare state of emergency to state and federal government. This in-depth report will be readily available in coming weeks to disclose the realities of the most serious problems occurring in the city of San Jose. I am working diligently for the last 60 days with them. In building a case against the city of San Jose and the (SCVWD) for maliciously allowing the destruction of our streams. I submitted video on homeless dumping 55 gallon drums and maliciously damaging river banks and creating extreme bio hazardous conditions on water ways; such as floating 5 gallon buckets of feces or raw sewage to San Francisco Bay on a daily basis. California Department of fishing and wildlife service Agent Byron Jones working diligently with other agents or officer too built their case by set up camera sting to build their case. Making immediate arrest when they are caught failing to abide by the law or reoccurring activities.

Location: Ridder Park Dr. to 880 Freeway over Crossing Creek along Schallengberger road to Old Oakland road. Photos and video clip of person empty a 55-gallon drum into the creek and washing it soon after a woman dumps empty a small garbage container and walking back to camp both of Asian descent.  
DSCN19499.AVI
River blockage on Coyote Creek 880 freeway over crossing creek large garbage debris dam. Buckets, coolers, containers and empty gas containers, all variety of household items mattresses, couches, chairs there is nothing excluded, and container of raw sewage left in and around watershed or creek, creating a numerous hazards in the waterway. City of San Jose or Santa Clara Valley Water District had done clean up later that week after Nov12th 2012, did not remove any stream or garbage blockage all floated downstream in the previous winter storm November 2012. These are the photos will illustrate the neglect and failure monitor or control the illegal activity on their properties after posting with signs on there property

Coyote Creek northern area from Montague expressway to East Brokaw Bridge crossing thru 880 Freeway bridge crossing to Ridder Park bridge crossing along Schallenburge Road to Berryessa Road. Along this area is one the most worse heavily populated and problematic homeless encampments in the city San Jose. Estimate are 4000 to 5000 persons possibly living within this area on east and west banks of Coyote Creek on city of San Jose property and (SCVWD) . With in this areas where endangered Steelhead Trout and King salmon are force to stage due small barrier impeding fish, which trap the fish within these large homeless encampments.

Department Fish and Wildlife wardens called in to investigate but could not effectively operate because of the heavily concentrated encampments or compounds communities.

Large garbage debris dams within a 1mile stretch of section stream. On several attempts the city San Jose has conducted cleanups and swept around campsite. Others that where evicted for the day return the following morning. They conducted a clean up on November of 2012 clean around campsites but never clear the large garbage debris dams that have been created from the problem of the homeless, and was allowed to float downstream with early storms to lower reach of the creek to the San Francisco Bay. As these photos will illustrate the ongoing illegal activity the City of San Jose is allowing to occur.

Affect of maliciously and purposely allowing biohazard or allowing direct delivery of raw sewage to creek system, allowing the storage heavy pollutant or trash on waterway or on city San Jose property without proper permits. Refusing to clear the dangerous material left in the waterways after conducting stream bank clean ups. Not monitoring or policing their properties under their signage under compliant to
the law. Allowing criminal activity to occur on the property. Allowing construction and stream bank construction to occur on property without permits. And failure to comply under their sewage treatment plant permitting agreement for operation. In conjunction of City of San Jose and Santa Clara Valley Water District (SCVWD) lack of concerned for allowing all of the illegal activity on their properties and creating a domino affects to endangered and threatened species and wildlife and the collapse of biodiversity or biology to sustaining aquatic and other wildlife. Affecting all species of life including humans on two of the major watersheds the Guadalupe River system and Coyote River system. For decades numerous complaints have been files by Guadalupe-Coyote Resource District through the years dating back to 1994. Against the City San Jose and (SCVWD) on the escalating problems of homeless encampment on the Guadalupe river system and on Coyote creek for homeless living within streams and maliciously allowing them to affect or take threatened and endangered species and allowing the destruction of the habitats along and within the regime of the water and river banks in the downtown areas of San Jose. Creating dangerous biohazard when people making contact with the water. Santa Clara Valley water District’s (SCVWD) personnel and staff have become ill working within the watersheds and person name will be used within this report. Lead fishery biologist Mrs. David Salsberry became critically ill when falling into the Coyote Creek several years back. Repeated stories about the biohazards on our creeks rating them the most dangerous streams to visit. Channel KRON 4 bay TV Stanley Robert people behaving badly on countless stories and KTVU channel 2 news. At location under Julian Bridge one the most problematic areas. Two homeless women found deceased on Guadalupe River from 2011 thru 2013.

Looking from Coyote Creek northeast banks from adjacent to 880 freeway stream crossing observing one of the largest garbage and trash debris dams left behind after the city of San Jose did a cleanup back in Nov 25, 2012.

These next current photos are from year of 2004. Area is known to be one of the most vital areas for early incoming Fall Run Chinook salmon and Steelhead Trout. Forced to stage with in the homeless encampment areas prior to moving up before winter’s storm arrive. Factors are small barrier trap fish within the areas at Ridder Park or Brokaw Road bridges to the Rail Road confine the fish to immediate area. Allowing people to easily take and consume threaten and endangered species at leisure. Chinook Salmon observed and document by Roger Castillo using Coyote Cr to confluence of the Penitencia creek within the Berryessa road Br. crossing. Adding that (SCVWD) has been document and trapping out going Fry Chinook Salmon as early as 1995 thru 1998, and electro shock fish in Penitencia Cr with AMT team as early as 2006 or 2008. This report is readily available and will be added to this filing. The factor are even more compounded during a drought scenario.

Word is out that living on San Jose creek is free. The hiding of homeless and criminal activity in our streams affects us all. The hardships are greatly ignored on how it affects citizens of San Jose for it eventually conveys over into our neighborhood and city streets. The transition from streams to landfills to cesspools is not acceptable to the taxpayer or the environmental communities, making the owner of the properties solely to blame. Allowing illegal activity to occur while knowing about it, and failure to assist other private or commercials properties within areas has exacerbated the problem of the homeless. Leaves the city of San Jose and (SCVWD) in contempt to manage duties on their properties and responsibilities under the laws given to them by State of California. The losses greatly ignored and our children children's are already being affected. Making contact with certain areas of streams cannot be thought of or considered at their current state. The danger streams pose to children and adult and wildlife in certain area with in parks system is being ignored. The streams are in peril of ever being used again with the current downhill trend and neglect. Nearly eight miles stream is not safely accessible to children within the city of San Jose on Coyote Creek and Guadalupe River. And yet families and children are force to live there because of housing shortage and lack of additional services. Conclusion; I believe there are seven categories of people that are living in our streams. Numerous people have approach or threaten my life throughout the years. Others living within the stream and have shared their stories with me including the news crew from station 4 KRON on what they have discovered.

1) Large families husband-and-wife with children not making ends meet and can afford the housing or no employment.
2) Elderly with no housing because lacking services or not enough income to have housing.
3) Veterans
4) Migrant workers or day laborers.
5) Mentally illness not able to attend for themselves as most of the sites are telling the story hoarders type illness and other mental illness.
6) Under criminal activates Drug addiction and drug trafficking.
7) Criminals and felons use stream to avoid the law.
8) Prostitution within the Guadalupe River garden area Taylor Road. Greg Kerekes photos
9) Early release criminals with not enough or lacking services.
10) Pedophile lacking service for house in designated areas. So they use the creeks KRON 4 Stanly Roberts
11) Individuals taking advantage of the situation and refusing to even want to pay rent and housing are utilizing the river systems to avoid the responsibilities. In other word why pay rent when you could live for free in the creeks.

12) City San Jose contributing to problem. Accommodating some minimal services like trash pick up in designated areas illustrate effort to hide the problem within channels of Creeks system. Homeless are flocking to San Jose due to the facts of allowing illegal activities on city San Jose property.

13) Factors of disasters in east coast happening throughout the country where storms or disaster have accord. So people are flocking to warmer states like California. Word that people could be accommodated in the creeks of San Jose is exacerbating the problem.

14) Overwhelming emergency service. Affected fire department and emergency response or ambulance dispatched. My estimates on call are nearing the hundreds of calls for fires and emergency dispatch to the Creeks. For 2012 thru 2013.
